

For more than 20 years, ATP-CGPharm has been supporting clients in the Life Science Industry with a broad range of services in GxP engineering, commissioning, qualification & validation, quality assurance, quality control and environmental monitoring.

We contribute ourselves every day to ensuring medical product quality, patient safety, and strict compliance with regulatory requirements by supporting the continuous improvement of the manufacturing processes and quality programs of our clients. Today we are proud to be renowned throughout the Life Science Industry as one of the preferred business partners and employers of choice.

To support our strong growth, we are looking for talented young professionals and experienced experts. At present we have an open position in Switzerland as:

Cleanroom Technology Engineer

Your Role

- You manage complex engineering projects for GxP compliant production and QC laboratory facilities for the Pharma and the Biotech Industry from concept phase to basic design, detailed engineering, construction and commissioning.
- You design HVAC and plant utilities (chilled water, clean compressed air and gases, black utilities, ...) systems.
- You set up, track and update project time schedules and investment plans.
- You manage the procurement of equipment and services, author specifications and assess supplier quotations.
- You coordinate internal resources and third parties for the execution of projects.
- You author, review and update engineering related documents according to general and company specific regulations and guidelines.
- You participate in qualification / validation of the designed systems.

About You

- You hold a technical university diploma (e.g. BS, MS, dipl. ing. or similar) and you have at least 5 years of relevant professional experience in GxP compliant engineering.
- You have profound technical expertise in cleanroom technology, incl. HVAC and utilities.
- An experience in construction will be considered as an advantage.
- You are a high experienced user of AutoCad and standard IT tools such as MS Office and MS Project.
- Knowledge of BIM / Revit, Navis Works Plant 3d, Plant P&DI, software for technical calculations in the field of HVAC / Utilities will be considered as an advantage.
- You have the ability to talk to and manage technicians, engineers or project owners always on eye level.
- You are able to identify and respond to customer demands and to add value to our clients' needs.
- You are mobile and flexible regarding the work location within the German speaking part of Switzerland.
- You are fluent in German and English, both spoken and in writing.

Our Offer

ATP-CGPharm offers long term career opportunities. In addition to an inspiring and motivating work environment we offer attractive remuneration packages and excellent social security coverage.

At ATP-CGPharm we truly value your efforts and we actively support you in your professional development and in reaching your goals.

Next Step

Now it is up to you. Take the next step and send us your application. It could be the first step in joining a company where your talent and passion are truly valued.
